CLINICAL SKILLS

- Manual Therapy & Mobilization
- Sports Injury Rehabilitation
- Return-to-Sport Protocols
- Acupuncture Therapy
- Gua Sha Therapy
- Exercise Prescription
- Electrotherapy (TENS/US/IFT/SWD)
- Gait Analysis & Biomechanics
- Sports Taping & Bracing
- Differential Diagnosis
- Bobath Concept & PNF
- Chest Physiotherapy
- Early ICU Mobilization
- EMT First Response Skills
- Yoga Physiology Integration
- Outcome Measures & Audit

COMPETENCY

Sports Rehabilitation

Musculoskeletal PT

Exercise Science

Neuro Rehabilitation

Neuroscience Applied

Critical Care / EMT

Cardiopulmonary PT

Epidemiology & Research

Acupuncture / Gua Sha

PROFESSIONAL PROFILE

I am a driven and globally-minded Doctor of Physical Therapy (DPT), currently pursuing my Master of Science in Sports Physical Therapy (MSPT) at Ibadat International University, Islamabad. I bring one year of intensive, multi-department clinical experience from Hayatabad Medical Complex (HMC) — the most prestigious teaching hospital in Khyber Pakhtunkhwa — spanning six specialized departments. Beyond my clinical work, I am actively enrolled in 14 internationally accredited specialization courses from the world's leading universities including Duke University, Johns Hopkins University, University of Michigan, University of Colorado Boulder, University of Cape Town, New York University, Arizona State University, and the University of Toronto. My unique combination of sports rehabilitation expertise, neuroscience-informed clinical reasoning, certified acupuncture and gua sha therapy, EMT emergency response training, and fluency in three languages positions me as one of Pakistan's most comprehensively trained and globally-connected physiotherapy professionals.

EDUCATION

Master of Science in Physical Therapy — Sports (MSPT)
2025 – Present

Ibadat International University, Islamabad

Specialization: Sports Rehabilitation · Advanced Biomechanics · Return-to-Sport Science · Performance Optimization

Doctor of Physical Therapy (DPT)
Graduated: September 2024

Iqra National University, Peshawar

Training across Orthopedics, Neurology, Cardiology, Pediatrics & Critical Care PT · Final-year rotations at HMC

INTERNATIONAL SPECIALIZATION COURSES

★ *Enrolled in 14 internationally accredited specialization programs from world-ranked institutions across USA, Canada, Africa & globally — a testament to relentless pursuit of clinical excellence.*

Medical Neuroscience
Duke University · *USA*

2024-25

ACADEMIC FOCUS

- Medical Neuroscience
- Neuroanatomy
- Musculoskeletal Sciences
- Clinical Research & Biostatistics
- Epidemiology & Public Health
- Exercise Physiology
- Anatomy, Physiology & Kinesiology
- Yoga & Health Engineering
- EMT Emergency Response
- PT & Exercise Management
- Professionalism in Health
- TESOL / Academic English

DIGITAL & TECH

CLINICAL EXPERIENCE

Clinical Physical Therapist — Multi-Department Rotation

Hayatabad Medical Complex (HMC) · Peshawar, KPK — January 2025 – 2026

OUTPATIENT DEPARTMENT (OPD) — 6 Months

- I conducted comprehensive musculoskeletal and neurological assessments for 20+ patients daily, evaluating posture, range of motion, muscle strength, pain levels, and functional limitations to design individualized treatment plans
- I developed and implemented evidence-based rehabilitation protocols combining manual therapy, joint mobilization, therapeutic exercise, and electrotherapy modalities (TENS, ultrasound, interferential therapy, and short-wave diathermy) tailored to each patient's specific diagnosis and goals
- I managed a diverse caseload of sports injuries — including ligament sprains, muscle strains, tendinopathies, and overuse injuries — applying return-to-sport protocols and sports-specific functional rehabilitation progressions
- I delivered post-surgical rehabilitation for patients following total knee replacement, total hip replacement, ACL reconstruction, and spinal surgeries, progressing them from early mobilization to full functional recovery
- I administered acupuncture and gua sha therapy to appropriate patients as adjunct treatments for pain management, muscle tension, and accelerated soft tissue recovery
- I educated patients and their families on home exercise programs, activity modification, pain management strategies, and injury prevention — ensuring continued recovery beyond the clinic
- I collaborated closely with orthopedic surgeons, neurologists, and general physicians within a multidisciplinary team and maintained precise clinical documentation including SOAP notes and outcome measure scoring

INPATIENT WARD ROTATIONS — 6 Months | 6 Specialized Departments

Orthopedics & Neurosurgery

- I provided post-operative physiotherapy for TKR, THR, spinal fixation, and laminectomy patients — implementing structured early mobilization, weight-bearing progressions, and functional rehabilitation protocols to restore independence
- I managed neurological recovery for peripheral nerve injuries and post-neurosurgical conditions using progressive strengthening, sensory re-education, and mobility training

Neurology Ward

- I delivered neurorehabilitation for stroke, TBI, and spinal cord injury patients using the Bobath Concept and PNF techniques, targeting motor control recovery, spasticity management, and functional independence
- I conducted gait re-education, balance training, and mobility retraining for hemiplegic patients, facilitating progressive recovery of ambulation, transfers, and activities of daily living
- I applied neuroplasticity-based rehabilitation principles — informed directly by my Duke University Medical Neuroscience training — to design task-oriented recovery programs for complex neurological cases

Cardiology Ward

- I implemented structured cardiac rehabilitation programs for patients recovering from MI, open-heart surgery, and CABG, progressing patients safely through Phase I and Phase II cardiac rehab protocols
- I delivered breathing retraining, diaphragmatic exercises, and incentive spirometry to optimize respiratory function and prevent post-operative pulmonary complications
- I monitored vital signs (HR, BP, SpO2, RR) during all rehabilitation sessions, recognizing clinical red flags and adjusting treatment intensity to ensure patient safety

⬡ Pulmonology Ward

- I applied advanced chest physiotherapy — percussion, vibration, postural drainage, and active cycle of breathing — for patients with COPD, pneumonia, bronchiectasis, and pleural effusion
- I supported ventilator weaning programs by implementing graded breathing exercises, positioning strategies, and early mobilization for mechanically ventilated patients

⬡ Pediatrics Ward

- I provided therapeutic interventions for pediatric patients with cerebral palsy, developmental delay, and congenital musculoskeletal conditions using play-based therapy, NDT techniques, and family-centered care
- I delivered age-appropriate chest physiotherapy for pediatric patients with respiratory infections, cystic fibrosis, and post-surgical pulmonary complications

⬡ Medical Intensive Care Unit (MICU)

- I executed early mobilization protocols for critically ill ICU patients — including passive ROM, bed mobility, sitting balance, and progressive out-of-bed activities — to prevent ICU-acquired weakness and reduce ventilator days
- I collaborated within the ICU multidisciplinary team — intensivists, nurses, respiratory therapists, and dietitians — to assess daily rehabilitation potential and deliver safe, goal-oriented physiotherapy under hemodynamic monitoring
- I applied advanced clinical reasoning and emergency response skills — further sharpened by my EMT training from the University of Colorado Boulder — to manage rehabilitation safely within high-acuity critical care settings

WHAT MAKES ME STAND OUT

🏆 Sports + Multi-System Mastery

I combine MSPT sports specialization with 6-department HMC clinical exposure — a breadth very few sports PTs possess anywhere in Pakistan

🌍 14 Global University Courses

From Duke to Johns Hopkins to Cape Town — I bring an internationally-calibrated clinical perspective to every patient interaction

💉 Acupuncture & Gua Sha Certified

Dual-certified in Niel Asher acupuncture and gua sha therapy — offering patients complementary treatment approaches beyond standard PT

🚑 EMT Emergency Response Trained

University of Colorado Boulder EMT training enables me to respond confidently to emergencies in sports, clinical, and field environments

🧠 Neuroscience-Informed Clinician

Duke Medical Neuroscience and Michigan Neuroanatomy training directly enhances my reasoning in neuro PT, sports rehab, and complex case management

📊 Research-Ready & Data-Driven

Johns Hopkins Epidemiology and Cape Town Clinical Research Biostatistics training enables critical appraisal and evidence-based protocol design

MY VISION

“My goal is to build Pakistan's premier sports rehabilitation center in KPK — where elite clinical care, global academic excellence, and modern data analytics come together to transform how athletes recover, perform, and succeed. I will not only treat injuries; I will shape the future of sports medicine in this country.”
